

Bharat Super App

An AI-powered lifestyle super app for India that unifies everyday needs — health, area intelligence, fuel & travel, government schemes, utilities and emergencies — behind one conversational assistant. **"One app that helps Indians with everyday life."**

Owner: Product Team · Status: Prototype complete (5 core screens live, 3 expanded) · Last updated: 28 June 2026 · Audience: Engineering, Design, QA, Stakeholders

1 • Product overview & vision

Bharat Super App collapses a dozen single-purpose apps into one assistant-first experience. Instead of hunting through menus, a user simply asks — by text or voice — and the app answers using AI reasoning over real-time local data, then offers a one-tap action (directions, apply, set reminder, call).

The product blends the spatial clarity of a maps app, the conversational ease of a modern AI chat, and the everyday utility of a payments super app, adapted to an Indian context and available in regional languages.

Representative user questions

- "Where can I get this medicine near me, and what does it cost?"
- "Which petrol pump nearby has the least crowd right now?"
- "Am I eligible for any government housing schemes?"
- "Is Baner, Pune a safe area to buy a house?"
- "Are there any power cuts in my area today?"

NORTH-STAR OUTCOME

The user should feel: *"This app understands my daily life."* Every feature is measured against whether it reduces the effort of a real daily task.

Scope of this release

7

Core domains

5

Bottom-nav tabs

8

Screens designed

2

Platforms (iOS + Android)

Live in prototype Home, AI Chat, Health, Government, Profile, Explore/Area Intelligence, Travel/Fuel, Emergency — with working light/dark themes and an iOS/Android frame toggle.

2 • Target audience & personas

Primary users are Indian families, working professionals, students and senior citizens aged 18–60. Secondary users include travellers, property buyers, farmers, women, and government-scheme beneficiaries.

PERSONA	GOAL	PRIMARY MODULES	DESIGN CONSIDERATION
Working professional (28–45)	Save time on errands & commute	AI Chat, Travel, Health	Speed, one-tap actions, voice on the move
Family decision-maker	Choose where to live, manage health	Area Intelligence, Health	Trustworthy scores, comparisons
Student (18–24)	Scholarships, affordable services	Government, Health	Eligibility clarity, low data use
Senior citizen (60+)	Pension, medicines, emergencies	Government, Health, Emergency	Large type, voice-first, simple flows
Farmer (future)	Schemes, mandi prices, weather	Farmer suite, Government	Regional language, offline tolerance

3 • Design system

Brand & colour

TOKEN	HEX	USAGE
Deep Saffron (primary)	#FF7A00	Primary actions, active nav, brand
Royal Blue (secondary)	#0057FF	Links, secondary actions, info
Emerald (accent)	#22C55E	Success, positive scores, "in stock"
Alert Red	#FF3B30	Emergency, SOS, high-crowd
Dark Grey / Ink	#121212	Text, dark-mode surfaces
Off-white	#FAFAF8	Light-mode background

Typography

Poppins (rounded, friendly) across the product — large headings, generous spacing, minimal clutter. Mono (Roboto Mono) only for data/code annotations. Minimum interactive type 11px caption / 14.5px body; hit targets ≥ 44 px.

Theming

Full light and dark themes driven by CSS custom properties (`--bg`, `--card`, `--text`, tinted accents). Dark mode uses near-black `#0C0C0F` surfaces with translucent tint layers. Both themes are toggleable at runtime and persist to user preferences.

Iconography & motion

Clean line icons (2px stroke, rounded caps) — no emoji in chrome. Micro-animations: `fadeUp` on screen enter, `bubbleIn` for chat messages, a pulsing/glowing gradient orb for the AI, and a typing-dot indicator. Animations are subtle (200–400ms) and respect reduced-motion.

4 • Information architecture

A persistent bottom navigation with five tabs anchors the app; the AI assistant is reachable from every screen via the Home search bar and is itself the connective tissue between modules (an answer deep-links into the relevant module).

TAB	CONTAINS	KEY SCREENS
Home	AI search, quick actions, recents, local alerts	Home hub, AI Chat
Explore	Area intelligence & local services	Search area, Area Score, categories, property, nearby
Travel	Fuel, CNG, EV, parking, toilets, road trips	Map + categories, station list, road-trip planner
Government	Schemes, eligibility, documents	AI prompt, eligibility checker, scheme results
Profile	Saved items & settings	Profile, saved, settings (theme/language/AI personality)

Health, Electricity/Utilities, and Emergency are accessed as quick actions and via AI deep-links rather than top-level tabs, keeping the nav to five.

5 • The AI assistant engine

The assistant is the centerpiece. The lifecycle of a single query:

1. **Input** — typed text, voice (multilingual STT), or a suggestion chip.
2. **Speech-to-text** — for voice, converted with Hindi/English and regional support.
3. **Intent classification** — routes the query to a domain: area, health, government, fuel/travel, utilities, emergency, or general chat.
4. **Context assembly** — location, profile, saved items, and chat history are attached.
5. **Data retrieval** — calls real-time sources for the chosen domain (see §8).
6. **Reason & rank** — the model synthesises a concise, friendly answer and ranks options.
7. **Rich result cards** — area score, pharmacy list, scheme card, fuel list, etc., rendered inline in chat.
8. **Action** — a one-tap CTA: directions, apply, set reminder, call, compare.
9. **Feedback loop** — 👍 / 👎 and learned context feed back into personalization.

AI PERSONALITY

Smart, helpful, friendly, trustworthy — never robotic. The assistant gives a clear recommendation (e.g. "If budget isn't a constraint, Baner scores higher overall") rather than dumping raw data, and always cites the basis for its answer.

Response contract

Every AI response returns a typed payload: `{ text, cards[], actions[], sources[], confidence }`. The client renders `text` as a chat bubble, `cards` as domain components, and `actions` as CTA buttons. Low `confidence` triggers a clarifying question instead of a guess.

6 • Feature modules (functional spec)

6.1 Home Live

The launchpad. Greeting, large AI search bar (placeholder rotates: "Find medicines / Check fuel prices / Government schemes..."), an AI icon left and voice icon right. Horizontally-scrolling quick actions: Medicines, Fuel, Area, Schemes, Electricity, Explore, Water, Emergency. Below: Recent searches (re-runnable) and Local alerts (water interruption, scheduled power cut, heavy traffic) as cards.

Functional rules: tapping the search bar opens AI Chat; tapping a quick action deep-links to the module; tapping a recent re-runs that query; alerts are location-scoped and time-bound.

6.2 AI Chat Live

Empty state shows a glowing blue+saffron orb, greeting, and four suggestion chips. Conversation renders user bubbles (right, blue) and AI bubbles (left, with optional rich cards). A typing indicator shows while the engine runs. Input bar supports text, voice, and send. Answers can carry an action button that deep-links to Health, Government, etc.

Rich card types: Area Score card (score, map preview, category grid, AI summary), pharmacy list, scheme card, fuel list, comparison answer.

6.3 Explore / Area Intelligence Live

Search an area → map preview + large Area Score circle (e.g. 8.4 "Excellent"). Category breakdown: Safety, Health, Schools, Internet, Water & Power, Traffic — each with an icon, score and one-line summary. Property section: avg rent, avg price, price growth, builder rating. Nearby counts: hospitals, schools, police, ATMs. CTA: "Ask AI to compare areas".

Future categories: Flood risk, air quality (AQI), pollution, walkability, public-transport access.

6.4 Travel / Fuel Live

Map with category chips (Petrol, CNG, EV charging, Parking, Toilets). Station list sorted least-crowded-first, each card showing name, distance, rating, price/L, and a colour-coded crowd indicator (● low / ● medium / ● high) plus Directions. Road-trip planner: enter "Mumbai → Goa" → AI returns fuel stops, food, EV chargers, stays, and attractions as chips.

6.5 Government schemes Live

AI prompt "What are you looking for?" with categories: Scholarships, Pension, Housing, Farmer, Startup, Women, Senior Citizen. Eligibility checker collects Age, Occupation, Income, State, Gender → AI matches schemes. Results are cards: scheme name, benefit, eligibility status, required documents, Apply CTA. Examples: PM Awas Yojana, Sukanya Samridhi, Atal Pension Yojana.

Future: document wallet (DigiLocker), application tracking, deadline reminders, auto-fill from profile.

6.6 Health / Medicines Live

Search a medicine (e.g. "Dolo 650") → nearby pharmacies with distance, price, stock status, hours, and Directions. AI suggestions: generic alternative, dosage guide, reminder offer. Prescription scanner: photo/upload → OCR extracts medicines → finds them nearby.

Future: medicine reminders engine, lab-test booking, doctor teleconsult, health records.

6.7 Emergency Live

Large call buttons: Ambulance (108), Police (100), Fire (101), Women Helpline (1091). Nearby list: hospitals, blood banks, police stations with Directions. A large SOS button runs a 3-2-1 countdown, then broadcasts live location to 112 and emergency contacts; cancellable at any time.

6.8 Utilities / Electricity MVP

Power-cut schedules and outage reports by area, water-supply interruptions, and the ability to book a water tanker. Surfaced via Home alerts and AI ("Any power cuts in Baner today?").

6.9 Profile Live

Profile header (photo, name, location). Saved: Medicines, Areas, Routes, Schemes. Settings: Dark mode, Language, Notifications, Privacy, AI Personality. Preferences feed back into AI tone and ranking.

7 • Technical architecture

A mobile-first client (this prototype is built in HTML/React-style components and runs identically on iOS and Android browsers; it is installable as a PWA and is structured for a React Native / Flutter port). A stateless API gateway fronts an AI orchestration layer and a set of domain microservices.

Recommended stack

LAYER	CHOICE	RATIONALE
Mobile client	React Native (or Flutter)	One codebase, true iOS+Android native
API	Node.js / NestJS or Go	Fast, typed, good streaming support
AI orchestration	LLM + RAG over domain data	Grounded, current answers
Intent / STT	On-device + cloud hybrid	Latency + multilingual coverage
Datastore	PostgreSQL + Redis + vector DB	Relational + cache + semantic search
Maps	MapmyIndia / Google Maps	India-grade map coverage

8 • Data model & integrations

Core entities

ENTITY	KEY FIELDS
User	id, name, phone, location, language, theme, aiPersonality, savedItems[]
Conversation	id, userId, messages[], createdAt
Message	id, role, text, cards[], actions[], sources[], confidence
Area	name, geo, score, categories{safety,health,schools,...}, property{}, nearby{}
Pharmacy	name, geo, distance, hours, stock[{medicine,price,available}]
Scheme	name, category, benefit, eligibilityRules, requiredDocs[], applyUrl
FuelStation	name, brand, geo, fuelTypes[], price, crowdLevel, rating
Alert	type, area, window{from,to}, severity, message

External integrations

- **Maps & places** — geocoding, directions, nearby POIs.
- **Government scheme database** — eligibility rules & metadata (e.g. MyScheme, state portals).
- **Pharmacy networks** — real-time stock & pricing.
- **Utility boards** — power-cut and water-supply schedules.
- **Emergency services** — 112 India / state dispatch, tel: deep-links.
- **DigiLocker / Aadhaar** — identity & document verification (future).
- **Mandi / Agmarknet** — crop prices (Farmer suite, future).
- **Weather (IMD)** — forecasts & advisories (future).

9 • Non-functional requirements

ATTRIBUTE	TARGET
AI first-response latency	< 1.2s to typing indicator; < 3s to full card
App cold start	< 2.5s on mid-range Android
Offline tolerance	Cached recents, saved items, last area score viewable offline
Accessibility	WCAG AA contrast, dynamic type, screen-reader labels, ≥44px targets
Languages	English + Hindi at launch; 6+ regional languages on roadmap
Data footprint	Low-bandwidth mode; image-light; lazy maps
Security	OTP auth, biometric unlock, encrypted PII at rest & in transit

10 • Analytics & success metrics

- **Activation** — % of new users who complete one AI query in session 1.
- **AI resolution rate** — % of queries answered without falling back to generic help.
- **Action conversion** — % of answers where the user taps a CTA (directions, apply, call).
- **Helpful rate** — 👍 / total feedback.
- **Retention** — D7 / D30; daily assistant queries per active user.
- **Module reach** — distinct domains used per user per week.

11 • Future roadmap

VISION

Extend the "understands my daily life" promise into livelihood, civic life and proactive assistance — with the **Farmer suite** as the flagship next domain.

11.1 Farmer suite Future • flagship

A dedicated domain serving India's largest occupational group, fully voice- and regional-language-first for low-literacy and low-connectivity use.

FEATURE	WHAT IT DOES
Mandi prices	Live crop prices across nearby markets; "best mandi to sell tomato today" with distance + price delta.
Weather & advisory	Hyper-local IMD forecast, rain alerts, sowing/harvest windows, frost/heat warnings.
Crop doctor (AI)	Photograph a diseased leaf → AI diagnoses pest/disease and suggests remedy & dosage.
Farmer schemes	PM-KISAN, crop insurance (PMFBY), KCC loans, subsidies — eligibility & apply.
Soil & fertiliser	Soil-health-card linkage, fertiliser calculator, nearby stock.
Equipment & labour	Rent tractors/harvesters; find labour; custom-hiring centres.
Sell direct	List produce to buyers/FPOs, cutting middlemen.
Veterinary & dairy	Cattle health, AI vet triage, milk-collection prices.

11.2 Other future domains

- **Payments & bills** **Future** — UPI, recharge, utility-bill pay; tie into the alerts a user already sees.
- **Education** **Future** — scholarships, exam dates, nearby coaching, skill courses.
- **Jobs & gig work** **Future** — local jobs, gig matching, skilling, scheme-linked employment.
- **Women's safety** **Future** — safe-route AI, live-share, community alerts, helpline integration.
- **Senior care** **Future** — medicine adherence, fall/SOS, pension & appointment reminders.
- **Civic / grievances** **Future** — report potholes, garbage, streetlights; track resolution.
- **Property marketplace** **Future** — listings ranked by Area Intelligence score; verified builders.
- **Proactive AI** **Future** — unprompted nudges: "Power cut in your area at 2 PM — charge devices," "PM-KISAN instalment due."

11.3 Phased delivery

PHASE	SCOPE	OUTCOME
P0 (done)	Prototype: 8 screens, AI chat, themes, iOS/Android	Validated UX & flows
P1	Real AI engine + Health, Area, Govt live data	First production release
P2	Travel, Utilities, Emergency hardened; Hindi	Daily-use breadth
P3	Farmer suite + regional languages	Rural expansion
P4	Payments, proactive AI, civic, jobs	Full super-app

12 • Risks, privacy & compliance

- **Data accuracy** — AI answers must cite sources and degrade gracefully when data is stale; never fabricate scheme eligibility or medical dosage.
- **Privacy** — location and health data are sensitive; explicit consent, on-device where possible, compliant with India's DPDP Act.
- **Medical/financial safety** — health and scheme guidance carries disclaimers and routes to official sources for the final action.
- **Emergency reliability** — SOS and call flows must work offline/low-signal and never be blocked behind auth.
- **Inclusivity** — voice-first and regional languages are mandatory, not optional, for the farmer and senior segments.

End of document · Bharat Super App — Product & Technical Documentation v1.0. Companion document: *Requirements & User Stories* (for engineering).
